About SenseCAP

Among the first launch of Seeed IIoT product series, SenseCAP is focusing on wireless environmental sensing applications: smart agriculture, precision farming, and smart city, to name a few. It consists of hardware products (sensors, data-loggers & gateways, etc.), software services (SenseCAP portal, mobile App, open dashboard), and API for device & data management.

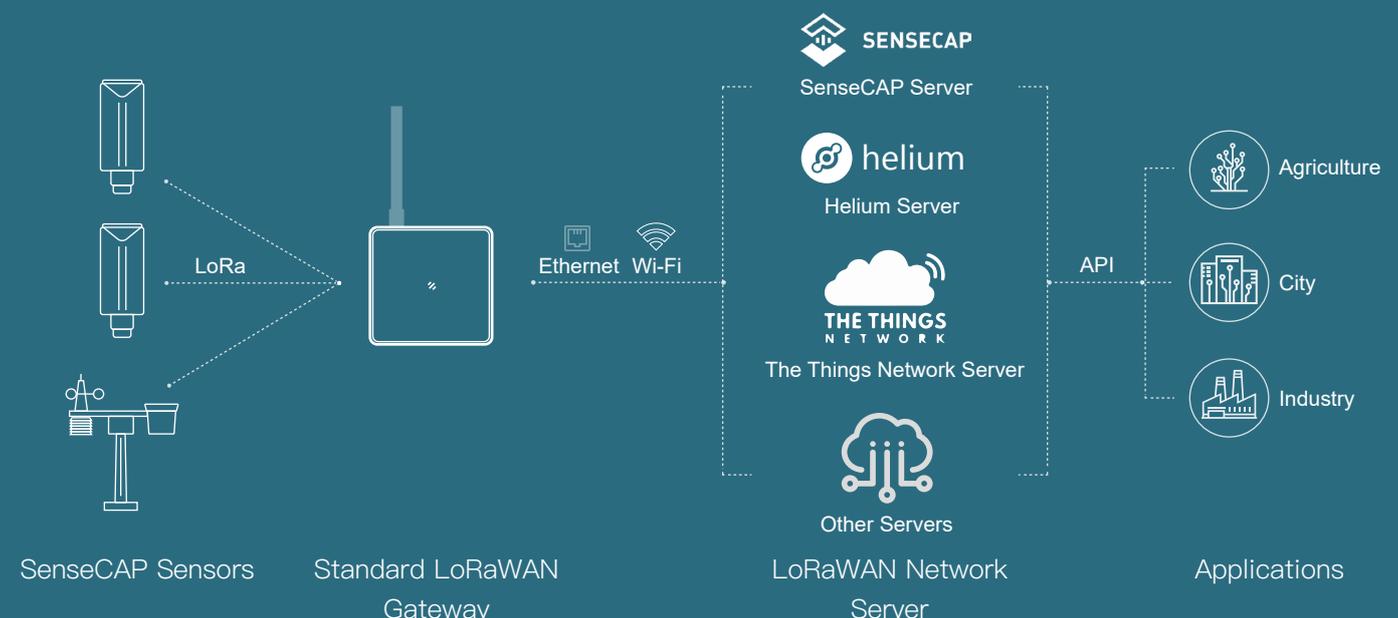

About S21XX/A110X Series

The next generation of LoRa sensors, the S21XX/A110X series offers users' industrial long-distance data acquisition via LoRaWAN. This series is suitable for a wide variety of different industries such as smart agriculture, smart buildings and industrial control.

With the IP66 rating, $-40 \sim +85C^{\circ}$ operating temperature and built-in 19Ah high-capacity battery, combined with the devices' low power consumption, the series can operate in harsh outdoor environments for up to 10 years with a range of up to 10km. The built-in Bluetooth facilitates setup and greatly reduces large-scale deployment costs. Users can focus on application development with the easy set-up, and start retrieving data in a few steps. Just install the device, bind it using the QR code and configure the network, then data can be viewed from the SenseCAP portal, which supports popular IoT protocols such as HTTP and MQTT.

Application

How to Select Gateway and LoRaWAN® Network Server

LoRaWAN network coverage is required when using sensors, there are two options.

Option 1

Sensors are used out of the box with the Helium network

1

Make sure you are covered by Helium Network.

2

Add Sensor to your account by scanning sensor QR code

3

Get the data from SenseCAP Portal and App

Option 2

Sensors are used with standard LoRaWAN network

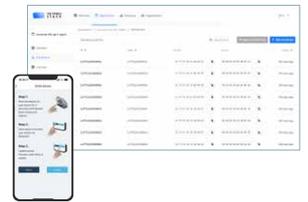

1

Deploy gateway and select LoRaWAN Network Server

2

Set parameters and get EUI/Key of sensor via SenseCAP App

3

Create a device on the LoRaWAN Server Console

4

Sensors join LoRa network and periodically upload data

* The LoRaWAN® name and the associated logo are licensed by the LoRa Alliance.
